The heading above each prompt names the tool and format it ran with.

Higgsfield, Seedance 2.0 mini, text to video, 480p, 15 s, vertical 9:16, audio on

16-bit retro video game cutscene in pixel art, chunky visible square pixels, limited 32-colour palette, dithered shading, side-on 2D view like a classic console game, sprite animation with 3-frame cycles, parallax pixel background layers, chiptune-era sound. Vertical 9:16, 15 seconds, one continuous scene at a sunny fairground. Every frame stays in the 16-bit pixel art look with chunky square pixels and

dithering; never photoreal, never live action. No text, letters or numbers anywhere: no signs, no labels, no lettering on the tower.

CAST (both adults, animals, the same design in every shot):
BEAR: a huge brown bear, three times the mouse's height, wide belly, small round ears, wearing a blue-and-white horizontal striped tank top. Smug grin.
MOUSE: a small grey mouse standing upright, as tall as the bear's knee, big round pink ears, long thin tail, wearing a green knitted scarf. Calm, quiet.
PROPS: a high-striker strength tester: a tall red-and-yellow wooden tower with a vertical metal rail, a round red striking pad on a low base at its foot, a silver puck that slides up the rail, and one round brass bell bolted on top. A wooden mallet with a long handle and a big barrel head lies against the base.
MAP: the tower stands centre-frame and fills the full frame height. The bear stands screen-left of the pad, the mouse screen-right.

0-3s, in the 16-bit pixel art look with chunky square pixels and dithering: medium-wide, camera at the bear's waist height. The bear points at the mouse and laughs loudly, then pokes the mouse in the chest with one finger; the mouse falls back onto his bottom.
3-6s, same 16-bit pixel art look with chunky square pixels and dithering: the mouse gets up, grips the mallet handle with both paws and drags the heavy mallet head across the ground to the pad. The bear laughs and pats his big belly.
6-9s, same 16-bit pixel art look with chunky square pixels and dithering: the mouse swings the mallet up over his head in one full circle and slams it down on the red pad. The silver puck shoots straight up the rail in a blur.
9-12s, same 16-bit pixel art look with chunky square pixels and dithering: tilt up the tower: the puck smashes into the brass bell, the bell snaps off its bolt and falls straight down, spinning.
12-15s, CUT TO medium close-up at the bear's head height, his head fills the upper half of the frame: the brass bell drops

onto the bear's head and covers it down to his nose, only his open shocked mouth showing, the bell rings with a loud CLANG and he wobbles. In the lower right of the same frame the mouse dusts off his paws and walks out of frame to the right.

Sound: fairground ambience, the bear's booming laugh, mallet scraping, a heavy thud on the pad, a rising whoosh, a sharp metal crack, a loud bell CLANG. No music. No dialogue.
